Dear CFGI Germany team,

I bring 25 years of finance expertise directly relevant to your GRC mandate. My background spans regulatory reporting, internal control design, and risk framework implementation across complex financial institutions—exactly the technical depth and mandant-facing discipline your role demands.

At Expert Zone Advisory, I led control system overhauls for insurance and asset management firms navigating IFRS, Solvency II, and multi-jurisdictional reporting requirements. One recent engagement: redesigned the entire control architecture for a €2B+ fund manager preparing for a capital raise, covering IFRS 9 implementation, governance restructuring, and regulatory alignment. The client closed their transaction on schedule with clean audit findings. I've also supported M&A deal teams on financial statement validation and carve-out accounting—work that directly mirrors your IPO and transaction advisory scope.

I'm fluent in German (working level) and English, with solid technical command of IFRS and HGB. The operational side—PMO discipline, stakeholder alignment, delivering under deadline pressure—is equally strong. What I lack is recent Big 4 audit experience; my last five years have been independent consulting and interim CFO-office roles. That said, my control methodology and client communication are sharper than they'd be from a pure audit track.

I'm genuinely interested in this role. The combination of financial advisory depth, governance design, and transaction exposure matches where I add most value.

Happy to discuss next steps.

Best regards,

****Xavier Robitaille****
