Re : Senior Product Manager - Regulatory Reporting

Building a single product that has to speak Solvency II, NAIC RBC, AM Best BCAR, and IFRS 17 fluently, then push AI into the reporting workflow underneath, is a wider brief than most regulatory reporting mandates I've seen, especially with the EMEA focus this role carries.

I've implemented Clearwater Analytics itself, from design through go-live, so I know the platform's investment accounting and reporting logic first-hand. I've translated IFRS 9 ECL methodology, amortized cost categorization, and IFRS 17 transition rules into cahiers des charges that engineering teams could build against, working the gap between actuarial, finance, and IT until the specifications held. I've also led Solvency II Pillar 3 QRT and ORSA reporting redesigns, closing reconciliation gaps and clearing suspense accounts during system migrations - the same cross-functional roadmap ownership this role asks for.

My regulatory depth sits in Solvency II and IFRS 9/17. NAIC RBC and AM Best BCAR aren't part of my track record.

My last mandate, the Clearwater Analytics implementation, ran hybrid across distributed teams, so remote collaboration is routine for me. As a contractor who is a non-UK Tax resident, based overseas, IR35 does not apply to me. Worth a call to see where the fit is real.
