I bring 25 years of finance and insurance transformation expertise—exactly what SimCorp needs to drive this shift from traditional software to outcome-focused services. My background spans full-value-chain delivery: business case definition, technical architecture, regulatory alignment, and execution discipline through complex stakeholder environments. That combination is rare, and it's what makes the difference when you're restructuring delivery models at scale.

I've spent the last decade building and leading the exact services you're building: designing standardized solutions for derivatives, collateral, and regulatory reporting; embedding myself between Solution Architects and delivery teams; and owning outcomes across finance, operations, and IT. Most recently, I led a three-year transformation program for an insurance major—redesigning their end-to-end finance operating model, automating 40% of manual processes, and shipping quarterly regulatory reporting on a completely new platform. That required the same horizontal thinking you're after: working across silos, translating business needs into technical specifications, and holding teams accountable to client outcomes rather than just feature lists.

I'm built for this role. The only honest gap: I've worked primarily as a senior independent consultant, not embedded in a single organization. That's actually an asset in your case—I've learned to operate cleanly in matrix environments, move fast across uncertainty, and deliver without heavy process overhead. But I understand if you're looking to build long-term team stability. Happy to discuss how this works for both of us.

I'd like to explore whether my background fits what you're solving in Milan. You can reach me at xro@xavier-robitaille.com or +33 6 64 89 09 43.
